

# Fatal Vision Goggles

Fatal Vision® is a training tool used to vividly demonstrate the concept of impairment and the dangers of impaired driving. Fatal Vision®'s purpose is not to duplicate impairment caused by a specific level of alcohol or other drug ingested by a human.

Alcohol and other drugs have an effect on the brain that results in a variety of impairments. The Fatal Vision® Goggles distort vision and cause behaviors that are similar to behaviors exhibited by someone under the influence of alcohol or other drugs.

Hundreds of law enforcement personnel across the country use the Fatal Vision® Goggles. Many of these professionals have used B.A.C. (Blood Alcohol Concentration) to describe the level of impairment exhibited by someone wearing Fatal Vision® Goggles. It was in their opinion that the behavior

exhibited by someone wearing the Silver Label Fatal Vision® goggles was similar to behavior exhibited by someone with a B.A.C. of .17 to .20. The general opinion shared by many of these professionals is that the Silver Label Fatal Vision® goggles provide a high level of impairment, while the Bronze Label

Fatal Vision® goggles provide a moderate level of impairment. We have adopted the use of B.A.C. to make it easy to describe the impairing effect produced by the Fatal Vision® goggles.

For more information or to reserve the "Fatal Vision" goggles (which simulate various levels of impairment) for your organization, contact Lisa Kons at: 800-444-9150 ext. 330 or [kons@minnesotasafety-council.org](mailto:kons@minnesotasafety-council.org)
